

## P-Tn VideoRECORD Documentation

A **VideoRECORD** is just one of **P-Tn's** 'Visual Documentation' format options, but one which is particularly effective for producing a highly detailed record on large engineering or construction projects. This may include roadway construction and major street improvements, sidewalk/curb/gutter replacements, and water / sewer pipelines and repairs. We use **VideoRECORDS** to document the pre-existing condition of adjacent properties and improvements, damage or defects, and landscape features. They are equally valuable for progress updates, and as post-construction records - verifying that the project restoration was properly completed, and when it was released to the property owners.

Frankly, on any project where contractors and equipment will be working on or near another owner's improved property, the production of a professional audio/video tape can be a valuable form of 'Visual Insurance', helping to avoid costly litigation and protect you from having to make unnecessary repairs for pre-existing problems. If a question arises regarding damage or defects to improved property adjacent to the construction, our **P-Tn VideoRECORD** will often clarify whether or not damage existed prior to starting work.

We began offering audio-videotape to clients nearly twenty years ago. Originally an alternative to conventional photography, a 'continuous motion' videotape with narrative actually permits us to record much more information than a series of photographs could provide, a **VideoRECORD** may be more economical on extremely large projects - where a large quantity of photographs would be cost-prohibitive. Many clients now require BOTH photographs and audio-videotape; photographs to keep available 'in-the-field' for quick general reference, plus detailed videotape archives 'in-the-office' for close examination when questions or disputes arise. Video conversion to DVD-ROM now makes it possible to these video archives along 'in-the-field', by using a laptop computer.

The investment in a **P-Tn VideoRECORD** prior to construction will often pay for itself before the job is finished ... by resolving arguments, or simply by providing peace-of-mind in knowing that you have this valuable information available to settle disputes. For as little as \$300, we can document smaller projects, and we would be happy to provide an estimate or proposal on larger jobs. When required in the project specifications, please feel free to contact **P-Tn** by telephone or email to request a bid. We can also provide (FREE downloadable) spec wording recommendations for engineers and architects who wish to make audio-videotape documentation a project specification requirement.
